Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "said second sensor" in line 9. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 6-7 and 10-11 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Pelc et al. (U.S. Pat. 4,663,591). Pelc discloses a method and apparatus for reducing image artifacts due to periodic signal variations in nuclear magnetic imaging that shows all the features of the claimed invention.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3742

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pelc in view of Zur(U.S.Pat.5,842,989). Pelc does not explicitly show cardiac or ECG sensors. Zur discloses an artifact reduction apparatus and method for use with magnetic resonance to reduce artifacts caused by motion. Zur explicitly shows using an ECG signal to suppress heart motion artifacts. It would have been obvious to use an ECG signal to perform an angiographic image with reduced artifacts.

Claims 8-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pelc in view of Vigen(U.S.Pat.6,044,290). Pelc does not show explicitly data acquired on either side of k-space or lines collected at a smaller range than those in a central position. Vigen discloses a time-resolved digital subtraction MR angiography using echo-planar imaging that shows different data collection at a region other than a central position and collecting on either side of k-space. It would have been obvious to one of ordinary skill to use these methods as taught by Vigen with the invention of Pelc so as to provide continuous sampling at a central location.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Mador, Stokar, Glover, Shimoni and Sachs are cited to show structure and methods similar to the claimed invention.
